## **Final Status Report on AHFC Energy Audits**

The three MAUs completed the UA Facient Investment Grade Energy Audits performed with State of Alaska Energy Gtsan Typical Energy Efficiency Measures (EEM) recommended at each main campus whighting retrofits, heating, ventilating and air conditioning upgrades, motor replacements, and door and window sealing or replacement. The single most cost effective sure to implement is the lighting retrofits, with a simple payback of under ten years are campus recommendations consisted mainly of heating and ventilating controls grades and improved insulation in building exterior envelopes.

Each campus is using the information geteerain the audits differently. Below is a summary for each MAU approach:

UAA received final energy audit reports from ESCO, Ameresco, for each of their community campuses and two of their main UAA campus buildings. UAA intends to accomplish the recommended EEMs contained in the reports by incorporating each of the recommendations into various R&R/DeferMaintenance projects included in their FY14 Capital Budget Request. Some of the rural campus recommendations are currently being accomplished using each campus' opegations or prior year capital funding. UAA intends to implement a reporting proseto track implementation of the audit recommendations and theoretical programmendations.

UAF plans to implement a majority of the recommended improvements using the selected Energy Services Company (ESCS) mens Building Technologies. UAF is currently reviewing final documents and contracts to implement EEMs on ten of its main campus buildings and at the three rural prasses of Bethel, Kotzebue and Seward. The main campus improvements will be fundedings a combination of bonds and Deferred Maintenance monies. UAF is pursuing laan through AHFCs Retrofit Energy Assessment for Loans (REAL) programfund the rural campus projects.

UAS had the ESCO Ameresco perform audinssix of their buildings in Juneau and Ketchikan. They will include the recommended EEMs in the scoping of future R&R projects.
